Gentlemen:

I am currently working on sudden cardiac death using animal models that simulate the human condition of patients having heart attacks and dying from lethal arrhythmias. One of my colleagues at the Hospital of the University of Pennsylvania Dr. Joel Bennitt indicated that you had a recent excellent symposium held in New York City and stated that you do support different areas of medical research.

Would you please send me information on those areas which you support and how one can apply for support from the Council for Tobacco Research. With many thanks.

Sincerely,

E. Neil Moore
